WoO Craftsman Sprint Series 2017 Notice

In the past few years there has been an increase in grounded tubing being used in sprint car chassis. We have seen in a few instances after a ground tubing frame has been sandblasted with an aggressive blasting media like sand, enough material has been removed making the tubing outside the MIL specification and therefore making that frame not legal to use in World of Outlaws Craftsman Sprint Car competition.

Advances in blasting media over the past years have improved and sand is not the only option. Soda blasting and nutshells among others are good choices for blasting with the ability to remove paint and powder coat but remove little or no metal. Please keep this in mind when using blasting media to clean frames.

The above information is subject to change per World of Outlaws guidelines.
